

# Accreditations

The International Council of Shopping Centers (ICSC - [www.icsc.org](http://www.icsc.org)); the global trade association of the shopping center industry, has issued Paris A. Tabor their Certified Development Design & Construction Professional (CDP) designation.

As a recipient of ICSC's prestigious CDP designation, Tabor has been recognized as someone who possesses in-depth experience, skills, knowledge, and understanding of development, design, construction and operations of shopping centers and other retail-related facilities. The CDP Certification Program identifies the professionals who have taken the time and made the commitment to gain a very high level of competence in the entire retail development process – demographic studies through entitlement, design, construction, and tenant coordination.

The CDP stands for competence; indeed mastery, of one's specialization both as a result of knowledge and experience. The examinations are predicated on application of knowledge and skill over numerous years, not just an understanding of theory or mastery of isolated facts.

The National Association of Homebuilders (NAHB - [www.nahb.org](http://www.nahb.org)) has acknowledged and certified Paris A. Tabor as a Certified Active Adult Specialist in Housing (CAASH) . He earned his CAASH designation through a combination of professional education and experience in the 55+ housing industry over the past twenty plus years.

Paris A. Tabor has successfully completed the Leadership in Energy and Environmental Design (LEED) certification examination and is now an Accredited Professional (LEED AP).

TEAC Structural Engineering is uniquely sensitive towards green design. With Perry Tabor's LEED accreditation, he has championed being a proactive partner in design discussions, introducing pre-consumer materials and procedures, contributing towards the achievement of exemplary accreditation.

Through close communication with the architect, MEP, LEED® AP and contractor, sustainable structural materials are utilized, advance framing is implemented and structural components are configured to accommodate all trades as a contribution towards achieving sustainable construction certification.

**Certified Aging-in-Place Specialist**

The CAPS program was developed by NAHB Remodelers—in collaboration with the AARP, NAHB Research Center and NAHB 50+ Housing Council to help home remodeling professionals meet the needs of the burgeoning seventy-seven million baby boomers market who are reaching retirement age and prefer to remain in their homes as they mature rather than seek assisted living and other arrangements. Paris A. Tabor has proudly earned his designation as a CAPS.
